

Charles Vincent Montero BSCS 1 - CSK

C Code

```
int main(){  
    double prev, pres, rdg, bill_prev, bill_pres, bill_rdg, curr_bill, 1st_pay, 2nd_pay,  
rounded_pay;  
  
    printf("ELECTRICITY CONSUMPTION\n");  
  
    printf("\nWhat's your previous electrometer reading? ");  
    scanf("%lf",&prev);  
  
    printf("What's your present electrometer reading? ");  
    scanf("%lf",&pres);  
  
    rdg = pres - prev;  
    printf("Diff Rdg: %.0lf\n",rdg);  
  
    printf("\nWhat's your previous reading of the electricity bill? ");  
    scanf("%lf",&bill_prev);  
  
    printf("What's your present reading of the electricity bill? ");  
    scanf("%lf",&bill_pres);  
  
    bill_rdg = bill_pres - bill_prev;  
    printf("Diff Rdg: %.0lf\n",bill_rdg);  
  
    printf("\nWhat's your current bill: ");  
    scanf("%lf", &curr_bill);
```

```

first_pay = curr_bill / bill_rdg;

printf("\n%.2lf / %.0lf: PHP %.2lf", curr_bill, bill_rdg, 1st_pay);

sec_pay = first_pay * rdg;

printf("\n\n%.0lf x %.2lf: PHP %.2lf", bill_rdg, first_pay, 2nd_pay);

rounded_pay = round(sec_pay/1000.0)*1000;

printf("\n\nRounding off to PHP %.2lf", rounded_pay);

return 0;

```

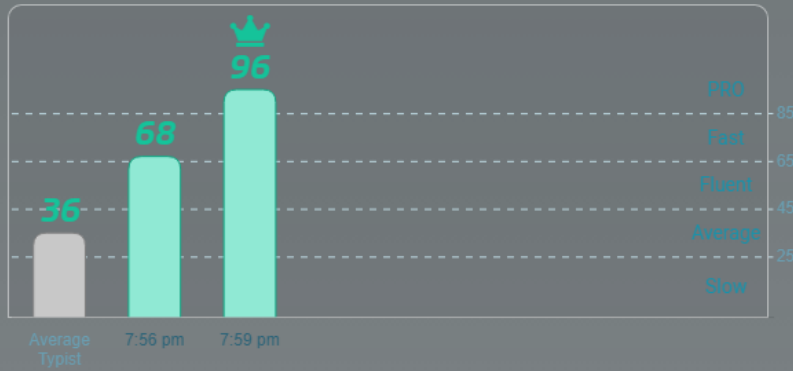

PSUEDO CODE

1. Input previous reading (A)
2. Input present reading (B)
3. Compute the Diff RDG ($R = B - A$)
4. Print/Display the Diff of RDG (R).
5. Input Prev Bill Reading (C)
6. Input Pres Bill Reading (D)
7. Compute the Diff of Bill RDG ($BR = D - C$)
8. Print/Display the Diff of bill RDG (BR).
9. Input Current Bill (CB)
10. Compute for First Pay ($FP = CB / BR$)
11. Print/Display the First Pay (FP)
12. Compute for Sec Pay ($SP = FP * R$)
13. Print/Display Rounded Pay (RP) with 2 decimal points
